Better in the beginning or in the end of diagram?

On first launch?

Such selectors are needed to allow admin to see how route will look under different conditions*, if there are any for selected user.

* "Conditions" are things that don't depend on system settings. It depends on how user and caller behave and call time. (Just in case)

John Smith can be reached through a different ways:

- 1.) dialed ext. 23 to reach "Sales" department, then Ext. 31 to reach "USA & Canada"
- 2.) dialed Ext. 31 directly
- 3.) dialed Ext. 102 directly (John's personal)
